MANUAL USAGE
This technical manual only contains information required to safely operate a MAC/MAT. See the appropriate Maintenance and Operators Safety Manual for specific vehicle system information and maintenance procedures. If your system is not covered in this manual please contact MEGA Corp. Product Support Group at:
US toll free: 1-800-345-8889
Direct: 1-505-345-2661 or visit our website at www.megacorpinc.com for more detailed contact information.

The exact location of the hazards and description of the hazards are reviewed in this section. All personnel working on or operating the machine must become familiarized with all the safety messages.

WARNING
Due to the nature of these processes, ensure that all safety information, warnings and instructions are read and understood before any operation or any maintenance procedures are performed. Some procedures take place with heavy components and at moderate heights, ensure proper safety procedures are maintained when performing these actions. Failure to use and maintain proper safety equipment and procedures will cause injury, death or damage to equipment.

WARNING, CAUTION AND NOTES
The following definitions are found throughout the manual and apply as follows:

WARNING
Operating procedures and techniques, which could result in personal injury and/or loss of life if not carefully followed.

CAUTION
Operating procedures and techniques, which could result in damage to equipment if not carefully followed.

NOTE
Operating procedures and techniques that are considered essential to emphasize.

USE OF SHALL, WILL, SHOULD AND MAY
Shall and Will – Used when application of a procedure is mandatory.

Should – Used when application of a procedure is recommended.

May - Used to indicate an acceptable or suggested means of accomplishment.
SECTION 1
Definitions and Abbreviations

SAFETY MESSAGES
There are several specific safety messages on this machine. The exact location of the hazards and description of the hazards are reviewed in this section. All personnel working on or operating the machine must become familiarized with all the safety messages.

Make sure that all of the safety messages are legible. Clean the safety messages or replace the safety messages if you cannot read the words. Replace the illustrations if the illustrations are not legible. When you clean the safety messages, use a cloth, water and soap. Do not use solvent, gasoline or other harsh chemicals to clean the safety messages. Solvents, gasoline or harsh chemicals could loosen the adhesive that secures the safety messages. Loose adhesive will allow the safety messages to detach.

Replace any safety message that is damaged or missing. If a safety message is attached to a part that is replaced, install a new safety message on the replacement part.

TOXIC GAS HAZARD (1)
This safety label is located on the side of the tank and at all water fill entrances.

DO NOT OPERATE (2)
This safety label is located on the outside of the front and rear control boxes (if equipped).

WARNING
Do not open this control box unless you read and understand the instructions and warnings in the Operator and Maintenance Manual. Failure to follow instructions or heed the warnings could result in serious injury or death.

BACKING RUNOVER HAZARD (3)
This safety label is located on the rear of the tank and inside the cab.

WARNING
Cutting or welding operation on the inside of the tank can cause the accumulation of toxic gases. Read and understand instructions and warnings in the Maintenance Manual. Failure to provide proper ventilation or breathing apparatus while conducting these operations may result in serious injury or death.

WARNING
The vehicle is equipped with a back-up alarm. Alarm must sound when operating this vehicle in reverse. Failure to maintain a clear view in the direction of travel could result in serious injury or death.
SECTION 1
Definitions and Abbreviations

FREEZING (4)
This safety label is located on the side of the tank, at the sump drain, and on the pump.

![Image of a snowflake and a book]

**WARNING**
Drain tank, fill pipe and valve in freezing weather. Refer to the Operator and Maintenance Manual for the procedure to follow.

NON-POTABLE (5)
This safety label is located on the side of the tank and sump drain.

![Image of a caution sign and a prohibited symbol]

**WARNING**
Water held within tank is not potable. Do not use tank for transport of water intended for human or animal consumption or serious injury or death may result.

DO NOT HOIST WHILE IN MOTION (6)
This safety label is located inside the cab.

![Image of a warning sign and a hoist cylinder]

**WARNING**
Do not engage hoist cylinders while vehicle is in motion. Before engaging hoist STOP the vehicle. Do not engage hoisting cylinders unless you read and understand the instructions and warnings in the Operator or Maintenance Manual. Failure to follow instructions or heed the warnings will result in injury or death.

FALL HAZARD (7)
This safety label is located at the top of the front and rear of the tank.

![Image of a caution sign and a fall hazard]

**WARNING**
Do not walk on the top of tank without fall arrest PPE. Serious injury or death could occur from a fall.
SECTION 1
Definitions and Abbreviations

ROTATING SHAFT (8)
This safety label is located on the pump.

WARNING
Do not place your hand or tools within pump bell while pump is rotating and/or pressure held within the motor supply hose. Refer to the Operator and Maintenance Manual for the procedures to operate and maintain the pump. Failure to follow proper procedures could result in serious injury.

HIGH PRESSURE SPRAY HEADS (9)
This safety label is located on the spray bar.

WARNING
Do not operate spray heads until all personnel are a safe distance away from the vehicle.

HIGH PRESSURE WATER CANNON (10)
This safety label is located on top of the cab control box.

WARNING
Do not operate the water cannon until all personnel are a safe distance away from the vehicle.

HIGH PRESSURE MOTOR (11)
This safety label is located on the hydraulic motor.

WARNING
Hydraulic motor and supply lines contain oil under high pressure. Improper removal and repair procedures could cause severe injury. To remove or repair, instructions in the Maintenance Manual must be followed.
CONFINED SPACE (12)
This safety label is located near the water tank access and fill ports.

WARNING
Do not enter confined spaces without following established site specific procedures. Failure to follow proper safety procedures will result in serious injury or death.

ABBREVIATIONS
BFV - Butterfly Valve
cc - Cubic Centimeters
CCW - Counter Clockwise
CW - Clockwise
fl. oz. - Fluid Ounce
FT - Feet
FPM - Feet Per Minute
GPM - Gallons Per Minute
IN/SQ FT - Inches per Square Feet
KM-H - Kilometers Per Hour
Kg - kilograms
Kpa - Kilopascals
l - liters
lpm - Liters per minute
LT - Left as viewed from the operators position facing forward
m - meters
MPH - Miles Per Hour
MAC - Mega Articulated Truck Conversion
MAT - Mega Supplied Articulated Truck and Tank
MSC - Mega Scraper Conversion
MST - Mega Supplied Scraper Tractor and Tank
Nm - Newton meters of torque
psi - pounds per square inch
RPM - Revolutions Per Minute
RT - Right as viewed from the operators position facing forward
SQ FT - Square Feet
VDC - Volts, Direct Current

WATER TANK (MAC)
The MEGA steel water tank consists of a water tunnel, primary floor, vertical baffles, bulkheads, outer skins, internal piping and external piping. The tank design is patented and known as the Magnum Anti-surge Stabilization System (MASS)

The tank structure is built around and on top of the tunnel super structure. The tunnel provides support to the floor plate, pivot structure, baffles and mounting for the water pump. The floor plates carries loads while the baffles and bulkheads add to tank strength and dampen water surges. External and internal piping is also used to carry water from the water pump to spray heads, monitor, spray bar, hose reel, dump bar and tank drain.

WATER PUMP
MAC/MAT units are configured with different types of water pumps, based on the size of the water tank. Typically the 5,000 – 7,000 gallon tanks are configured with the Mega M-3, while larger tanks are configured with the B-4, Mega M-4, or Mega M-4B pumps. These water pumps are similar in design, so for the purposes of this manual the Mega M-4 (6 inch inlet & 4 inch outlet) is used to present component information.

M-4 Water Pump major components and their functions are:
1. Bracket – Main frame of the pump that allows a pump to be bolted to the tanker and provides the means to direct mount the hydraulic drive motor.
2. Volute Case – A “snail shell” shaped case that encloses the impeller. It is narrow at the center and enlarges from there to the discharge area.
3. Wear Ring – Acts as a bearing surface between the impeller and volute case. Constructed of bronze material.
4. Impeller – Rotating wheel attached to the shaft that accelerates the speed of the water producing water flow and pressure.
5. Shaft Seal – Confines grease to the inner and outer bearing area while keeping foreign material from entering the bearing area and seals water inside the volute case.
6. Rope Seal – Provides a seal around the rotating pump shaft at the volute case. Constructed of a graphite rope material that is designed to drip water and allow shaft lubrication.
7. Upper/Lower Bearings - Provide roller surface for the pump shaft.
HYDRAULIC DRIVE MOTOR
A gear type motor that drives the water pump. The hydraulic motor is mounted to the top of the water pump and receives hydraulic pressure from the vehicle hoist at 1800-2500 PSI and flow rates up to 85 GPM to operate. The hydraulic motor is coupled directly to the water pump shaft and rotates in a clockwise (CW) direction. A cross-over line with a flow control valve is used to bleed off hydraulic oil flow to precisely set the speed of the hydraulic drive motor.

HYDRAULIC FLOW CONTROL VALVE
The hydraulic flow control is directional. The arrow on the body indicates the direction of oil flow to meter the bypassing oil. The adjusting knob on the valve will allow adjustment of the oil flow to bypass the drive motor, up to 135 LPM (35 GPM) or up to 700 RPMs (RPM increase/decrease will vary depending on the size of hydraulic drive motor the unit is equipped with). If the flow control is reversed, the flow control adjusting knob will not function and the full flow capacity of the valve will bypass. This can result in water pump rpm being below specifications with no adjustment capability of the adjusting knob. By turning the adjusting knob clockwise the hydraulic oil that is bypassing will be reduced, increasing the speed of the water pump. Turning the knob counterclockwise will increase the volume oil being bypassed reducing the water pump speed. The flow control valve is typically mounted on the PRESSURE manifold of the hydraulic drive motor.

HYDRAULIC DRIVE MOTOR ACTIVATION
The hydraulic drive motor on MAC is typically driven by the chassis hoist hydraulic system. The activation can be controlled by the existing electric hoist valve. The MEGA cab control pump switch commands the hoist valve to operate by sending an electric signal to the electric actuator on the hoist valve. This operates the hoist valve, diverting the hydraulic oil to the water pump drive motor.
CAB CONTROLS (ANALOG)

Multi-function control box that is mounted in the vehicle cab to control all water tank functions. Controls are available for the monitor, intermittent spray, water pump, work lights, foam suppression, adjustable nozzle, system, spray heads, spray bar, gravity dump bar, and tank drain valve. The control box also provides indications of tanker water level and a system fuse holder. The cab controls require 24 VDC vehicle power to operate.

The control functions operate as follows:

<table>

SECTION 2
System Description

CAB CONTROLS (DIGITAL)

This system is designated as a Digital integrated Spray Control System (DiSCS). The system is comprised of control boxes, logic controllers, sensors, and cabling. It is a multi-function control system with a separate joystick box that is mounted in the vehicle cab. These two boxes control all water tank functions. The master switch box operates the water pump, spray heads, intermittent spray, work lights, hose reel, dump bar, suction loading, and tank drain valve. The master switch box also provides indications of tanker water level and water pump protection features. The remote mounted joystick box operates the water cannon, adjustable nozzle and foam suppression. The cab controls require 12/24 VDC vehicle power to operate.

ABBREVIATIONS AND DEFINITIONS
AUX1 – Auxiliary or additional optional function
BFV – Butterfly Valve
DMPBAR – Dump bar for heavy spray of water close to ground. Can be either a gravity or pressure dump bar (pressure dump bar requires water pump activation to operate).
DRAIN – Drain (gravity or pressure) for evacuation of water from tank, mounted typically at the rear of the tank.
KPH – Kilometers per hour
LT VSS – Left Vertical Side Spray
LTC – Left Center Spray Head
LTR – Left Rear Outer Spray Head
MPH – Mile per hour
RAMP – Ramping Control feature. Rate of increase or decrease in speed of water flow during PUMP engagement or disengagement

RT VSS – Right Vertical Side Spray
RTC – Right Center Spray Head
RTR – Right Rear Outer Spray Head

The master switch box control functions operate as follows:

<table>
<thead>
<tr>

</tbody>
</table>

BASIC SYSTEM THEORY OF OPERATION
Spray system power is provided by chassis 12/24 volt DC power. Power is routed to cab controllers and logic control panels by turning on the switched power via the ignition key switch.

When the chassis ignition switch is turned ON, the master switch box will undergo a functional self-test. During this process, ALL LEDs will first turn ON, then off. While this is occurring, the water level indicator lights will initially register a FULL tank, and will then decrease down to EMPTY. The EMPTY light will blink, and then the water level indicator will count up to

register the current water level of the tank.

Cab control power is then activated by turning the cab control POWER switch ON while logic controllers are switched on when the chassis ignition switch is turned ON.

The spray system will function normally when cab control power is applied (cab control POWER switch ON) and sufficient water level (water level EMPTY light not flashing) is present. Activation of a specific function is accomplished by depressing the selected function switch on the master switch box or joystick box.

Depressing the switch sends a signal to the logic control panel in the solenoid box to activate a given function. The logic control then receives the signal and provides an output command to the given coil or function.

Once the logic control panel output is processed, the logic control sends a feedback signal back to the cab control box to illuminate the LED on the selected function switch. If the switch LED does not illuminate, a malfunction may exist in the logic control, wiring harness or cab control box.

NOTE
If a function switch is depressed with no corresponding switch LED, check to ensure system power switch is ON and the water level empty LED is not flashing. If the switch LED is not illuminated, a malfunction may exist.

NOTE
If the selected function switch LED illuminates and the component on the water tanker is not functioning, the component (water-way valve, spray head or water cannon) may have malfunctioned.

As functions are turned on and off, the water pump switch will remain illuminated unless all spray system functions (water-way valves, spray heads or water cannon) are turned off. The logic control will automatically turn the water pump off if all valves are closed to prevent over-temp of the water pump volute case. As the water level of the tank drops and
the EMPTY LED begins to flash, the logic controls will deactivate the water pump to prevent cavitation or dry running of the water pump.

**WATER PUMP PROTECTION FEATURES**

**Soft Start and Stop** – The water pump is protected from sudden starts and stops whenever the pump is turned ON or OFF via the switch or any auto/logic control feature. This is accomplished by the logic control system slowly commanding the appropriate proportional hydraulic control valve to open or close slowly to prevent hard starts or stops that can reduce water pump service life.

**Low Water Protection** – The water pump is automatically turned off by the logic control system when a low water condition is detected. The logic control system monitors tank water level and commands the water pump to turn off when a predetermined low water condition is noted. This prevents the water pump from running in a dry sump that will over-heat shaft seals due to lack of water. Continued use will damage the shaft seals.

**No-Flow Conditions** – The water pump is automatically turned off after about 100 seconds, whenever all water discharge valves are closed. The logic control system monitors all discharge valves and begins a TIME OUT cycle to turn off the water pump after about 100 seconds. Any time a discharge valve is opened during the timing cycle, the clock is reset. This feature prevents the water from heating up due to the water pump impeller spinning in a sump with no flow. The heating of the static water will also heat the water pump causing deterioration of grease and premature bearing failure.

**MASTER SWITCH BOX EXTENDED FUNCTION DESCRIPTIONS**

**POWER** – Turns POWER ON and OFF to cab controls and digital controllers.

**PUMP** – Sends request for pump engagement/disengagement to the digital control processor. The digital controllers will activate the hydraulic circuit to slowly ramp-up or ramp-down the water pump.

The water pump switch will flash whenever the switch is on and the following conditions apply:
- Low water condition is sensed (EMPTY LED is flashing).
- No flow condition is sensed (for about 100 seconds, no waterway valves are open)

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE will result in water pump component damage and reduced service life.

**INTMNT (Intermittent Function)**

Intermittent spray function sends request for adjustable timing of spray head and dump bar as commanded by the tON and tOFF dials.

Intermittent will only operate if at least 1 discharge function (spray head or dump bar) switch is activated. Water discharge can be stopped at any time when in INTMNT mode by turning discharge function switches OFF. The timer will continue to cycle even if no water is being sprayed.
SECTION 2
System Description

The tON and tOFF adjusting knobs command timing as follows:

- **t ON** – Adjusts spray head ON time.
- **t OFF** – Adjusts spray head OFF time.

The relationship between dial rotation and ON/OFF time is as follows:

- zero to 3 o’clock position: 3 sec to 15 sec
- 3 o’clock to max position: 15 sec to 30 sec

**NOTE**

The above time ON/OFF scale applies to firmware versions 3.7.0 and above. For firmware versions 3.6.x and below, the range is 5 seconds to 30 seconds, scaled linearly across the rotation of the dial.

The intermittent function will turn selected spray head or dump bar on and off. Duration of tON and tOFF cycle times are selected by setting the appropriate dials on the master switch box. When the INTMNT switch is ON and functions are selected, the operator will observe different switch LEDs conditions to indicate operation within the tON and tOFF cycles. When a selected function switch (spray head or dump bar) is operating during an ON cycle, the selected function switch LED will be illuminated as well as the INTMNT switch LED. When the INTMNT cycles automatically to an OFF cycle, INTMNT switch and function switch LEDs will extinguish. As the ON cycle is about ready to engage, the INTMNT switch LED will flash 3 times at the end of the OFF cycle to indicate the selected spray functions are about to be turned ON. These light conditions will change back and forth until intermittent or function switches are turned off.

**Water Level Indicator** – Indicates tank water level as sensed by the water level pressure sensor in the rear of the water tank. When the red **EMPTY** LED light flashes, the tank is at minimum water level. This low level signal is also sent to the logic control to automatically ramp-down the water pump to prevent component damage. Water pump operation can only be restored if sufficient water is in tank to extinguish **EMPTY** light.

**NOTE**

In order to re-activate the water pump after low-water shut-off, first fill the water tank with sufficient water capacity to permit pump operation. Then turn the PUMP and POWER switches OFF. Cycle the chassis ignition key OFF/ON. Wait for the Master Switch Box to complete its lights check. Then, if the water level gauge reads above **EMPTY**, turn the POWER and the PUMP switches on.

**NOTE**

Certain terrains and water level fluctuations may allow low water protection to capture a low water level condition, causing the pump ramp-down. If conditions allow water pump activation after water level/terrain fluctuations have ceased, then the water pump may be re-activated by following the steps in the previous note.

**Pressure Discharge Function Descriptions:**

**Spray Heads** – Control opening or closing of the associated valve when selected, or automatically controlled when INTMNT function is selected.

**Dump Bar (Pressure)** – Controls opening or closing of the BFV when selected, or automatically controlled when INTMNT function is selected.

**Suction Load** - Allows continuous hydraulic water pump drive circuit flow during a low water level condition. Also disables use of any other master switch box waterway valve.
 SECTION 2
System Description

AUX FUNCTIONS

AUX 1 – Sends request for operation of auxiliary functions or additional non-standard options of spray system. This function is unique to a specific tank serial number.

AUX 2 (Suction Load Station) – If equipped, sends a request to the hydraulic water pump drive circuit to allow suction load pump drive motor operation during a low water level condition while also disabling the timed-out function. When turned ON, the AUX2 switch LED will flash rapidly and all pressure discharge functions are disabled.

HOSE – Allows continuous water pump operation for hose reel use while also disabling the use of any other master switch box waterway valves.

NOTE
Ensure all discharge function switches are OFF when using HOSE function. Activating the HOSE switch requests all discharge function to turn OFF (All Spray heads, Water Cannon BFV, Drain, Dump Bar and FOAM).

Non-Pressure Discharge Function Descriptions:

Dump Bar (Gravity) – Controls opening and closing of the BFV when selected, or automatically controlled when the INTMNT function is selected.

JOYSTICK BOX EXTENDED FUNCTION DESCRIPTIONS
The joystick box houses logic controls for the joystick and the FOAM, NOZZLE, and BFV switches. These switches and the joystick control requests for water cannon operation.

FOAM – Sends request for FOAM agent valve to open or close.

NOZZLE – Sends request for adjustable nozzle on water cannon to move from FAN/FOG to STREAM spray patterns.

BFV – Sends request to open or close butterfly valve. The butterfly valve controls water flow to the Water Cannon. Activating the BFV switch requests the water PUMP to stay ON with NO other pressure discharge functions activated providing, sufficient water is in tank to allow command to be sent.

JOYSTICK – Sends requests for rotation and elevation motion for water cannon operation.

GROUND SPEED SENSING (GPS) CONTROL
The MEGA ground speed sensing control system is an independent and self-contained GPS unit and antenna that provides speed information to the existing Mega Digitally Integrated Spray Control System (DiSCS). The DiSCS's logic control uses the ground speed signal to automatically cycle and pulse spray heads to obtain a desired lay-down of water regardless of ground speed. The system contains controls to adjust maximum water discharge speed as well as actual rate of flow. This automatic control reduces water usage and prevents over-watering of haul roads and intersections.

The system will automatically close all discharge functions (spray heads) below 5 KPH/3 MPH to prevent puddling of water at intersections. The system also opens selected discharge functions when accelerating above 5KPH/3 MPH.
SECTION 2
System Description

The system warns the operator of all malfunctioning system functions and provides full manual control of all spray system functions in the event of an AUTO mode failure. All automatic system protection features of low water level conditions, no-flow conditions and water pump soft start/stop feature still operate normally in the AUTO mode.

GPS EXTENDED FUNCTION DESCRIPTIONS

AUTO – This function has priority over intermittent mode. The intermittent light will illuminate steadily when operating conditions are met and AUTO is ON. AUTO enables vehicle speed signal from the GPS module to activate the speed sensing mode, and operates the spray system based on RATE and SPEED adjustments. Pulse will begin when the AUTO function requests reduced volume.

NOTE
Near or below 4.8 KPH/3 MPH, AUTO will switch to INTERMITTENT mode and discharge functions may operate continuously or ramp down the water pump to OFF. When vehicle speed rises above 4.8 KPH/3 MPH, AUTO will resume control of the system.

SPEED – Above what vehicle speed the command is sent for maximum flow of all selected discharge functions (spray heads). Below this vehicle speed, timed cycles and/or reduced water volume flow occur.

NOTE
The scale for the SPEED function is 0 KPH/0 MPH (Full LEFT) to 48 KPH/30 MPH (Full RIGHT).

When vehicle speed goes below the set SPEED, application rate of water discharged will be either pulse the requested discharge functions and/or reducing the number of discharge functions based on the RATE selected.

NOTE
IF vehicle speed is GREATER than set SPEED the RATE has little or no effect on water discharge. Typically all requested pressure discharge functions are ON and no timing cycle.

Reduced Volume Mode – Reduction in discharge volume by reducing the number of spray heads requested to activate.
- If 4 rear spray heads are requested, reduced volume allows only the 2 outer spray heads to turn ON and the 2 center spray heads are OFF.
- If 3 rear spray heads are requested 1 spray head will be OFF, typically the center head adjacent to the outer head requested.
- If 2 spray heads are requested 1 spray head will be OFF typically the center spray head unless no center spray heads are requested, then NO spray heads will be OFF.

Pulsing – Reference to Pulse Width Modulation or ON/OFF cycle.

RATE – Is the distance traveled/time for spray head ON cycle.
- Knob turned counterclockwise reduces ON distance/ON time
- Knob turned clockwise increases ON distance/ON time
SECTION 2
System Description

WATER CANNON SYSTEM
The system is comprised of a water cannon (hydraulic or electric), hydraulic control valve assembly or logic box, butterfly valve assembly, nozzle and controls.

WATER CANNON (Hydraulic)
A metal waterway that directs a stream of water in both elevation (up-down) and rotation (right-left). Hydraulic motors move the waterway based upon hydraulic flow from the hydraulic control valve assembly as commanded by the cab control joystick. The water cannon is threaded to a flanged pipe that mounts directly above the BFV. The water cannon also provides mounting for a variety of different nozzles.

HYDRAULIC CONTROL VALVE ASSEMBLY
The assembly contains three hydraulic solenoid valves that direct hydraulic pressure to the hydraulic motors on the water cannon and BFV cylinder as commanded by the cab control box. A pressure relief valve is incorporated in the manifold block to protect the water cannon system against any over pressurization conditions. The assembly is mounted to the tank lower flange and receives hydraulic pressure from the vehicle hydraulic pump.

HYDRAULIC BFV ASSEMBLY
A hydraulically operated valve that opens or closes to control water flow to the water cannon. The hydraulic cylinder receives hydraulic pressure from the hydraulic control valve or solenoid control box assembly as commanded by the cab control water cannon switch. The assembly is clamped between upper and lower pipe flanges.

WATER CANNON (Electric)
A metal waterway that directs a stream of water in both elevation (up-down) and rotation (right-left). 24 VDC electric motors move the waterway based upon filtered electronic signals from the logic box as commanded by the cab control joystick. The water cannon is threaded to a flanged pipe that mounts directly above the BFV. The water cannon also provides mounting for a variety of different nozzles.

ELECTRO-PNEUMATIC BFV ASSEMBLY
An electro-pneumatic valve that controls the flow of water to the water cannon. A 24 volt DC solenoid receives commands from a cab control MONITOR / BFV switch through the logic box to route pressurized air to an air chamber which opens or closes a 3” valve. The assembly is clamped between upper and lower pipe flanges.

WATER CANNON NOZZLES AND STREAM SHAPERS

Smooth Bore Nozzle
A cone shaped 1.5” diameter nozzle that directs water flow. The nozzle has a built in stream shaper that smooths water stream flow to increase water stream distance.

Smooth Bore (Stackable)
A segmented cone shaped nozzle that directs water flow. The nozzle opening is adjusted by removing segments to acquire the most efficient nozzle opening for a given water pump operating pressure. Nozzle segment diameters are 1”, 1½”, 1¼” and 2”. The nozzle requires and in-line stream shaper to increase water stream distance.
SECTION 2
System Description

**In-Line Stream Shaper**
A performance enhancer that is mounted between the water cannon outlet and the selected straight bore nozzle. The stream shaper pathway is a honeycomb style channel designed to efficiently shape a water stream to maximum water stream distance.

**Manual Adjustable Nozzle**

**Fog/Stream:** A modified straight bore nozzle that allows the operator to manually adjust selected water stream patterns from fog to stream. Some nozzles are configured for fire suppression foam eduction.

**Fan/Stream:** A modified straight bore nozzle that allows the operator to remotely adjust selected water stream patterns from flat fan to stream from the cab control. The nozzle inner or outer barrel is moved by an electric actuator to obtain the fan or stream pattern. The flat fan pattern orientation is adjustable from horizontal to vertical by reorienting the nozzle on the water cannon.

**Remote Adjustable Nozzle (Electric/Hydraulic)**
A modified straight bore nozzle that allows the operator to remotely adjust selected water stream patterns from fog to stream from the cab control. The nozzle inner or outer barrel is moved by an electric or hydraulic actuator to obtain the fog or stream pattern. Some nozzles are configured for fire suppression foam eduction.

**PNEUMATIC SPRAY HEAD**
A two piece aluminum valve body and adjustable ring mounted to a water supply header pipe. The upper portion of the valve body is an air chamber with a diaphragm and guide disk assembly attached to the bottom. The air chamber receives pressurized air from the solenoid control box as commanded by the cab control switch. When the upper portion of the valve body is pressurized the guide disk will seal the opening on the lower portion of the valve and stop water flow.

When the cab control system is OFF and the water pump is OFF the air chamber incorporates a spring that will apply pressure to the guide disk assembly and seal the opening on the lower portion of the valve and stop flow. When air pressure is removed from the upper portion of the valve body when the water pump is ON and the cab control switch ON, pressurized water from the header pipe will unseat the guide disk and water will flow from the lower portion of valve.
SECTION 2
System Description

HYDRAULIC SPRAY HEAD

A two piece aluminum valve body, hydraulic cylinder and adjustable ring mounted to a water supply header pipe. The upper portion of the valve body contains a hydraulic cylinder that receives hydraulic pressure from the system solenoid control box as commanded by the cab control switch. When the hydraulic cylinder on the upper portion of the valve body is pressurized the cylinder extends to contact the guide disk and seal the opening on the lower portion of the valve and stop water flow. When the cab control system is OFF and the water pump is OFF the upper valve body incorporates a spring to apply pressure to the guide disk to seal the opening on the lower portion of the valve and stop flow. When the spray head switch is turned on hydraulic pressure retracts the hydraulic cylinder and pressurized water from the header pipe will unseat the guide disk and water will flow from the lower portion of valve.

Spray Head Adjustable Rings

The adjustable ring is used to control fan width and water flow. The ring may be loosened and rotated to expose more or less of the lower valve opening to control water fan width from 15° to 90°. The ring also may be used rotated to a 1/4” or 3/8” slot as shown in figure 2-2 and 2-3 to increase or decrease overall water flow. The greater the opening, the greater the water flow.

SOLENOID CONTROL BOX

The control box assembly is mounted to the forward bulkhead or top skin of the MTT. The assembly contains pneumatic or hydraulic solenoid valves that direct pneumatic or hydraulic pressure to the spray head as commanded by the cab control box. The solenoids receive pneumatic pressure from the vehicle or hydraulic pressure from water pump oil circuit and 24 VDC power from the cab control box.

DUMP BAR

A spray bar that contains several rows of 3/8” drain holes to dispense water. A hydraulically operated BFV controls the water supply to the dump bar. The BFV is controlled electrically from the cab control box and is actuated by a hydraulic cylinder. The actuators receive hydraulic pressure from the solenoid control box assembly. Dump bars can be either gravity or pressure fed.
SECTION 2
System Description

FRONT BUMPER SPRAY BAR
A spray bar equipped with 1 or 2 spray heads mounted to the front bumper of the tractor. Pressurized water is supplied by a discharge hose attached to a pipe swivel at the forward bulkhead of the water tank that is connected to the water pump discharge piping.

TANK DRAIN
A hydraulic BFV attached to the water tank pressure pipe is used to drain water from the water tank. The BFV is controlled electrically from the cab control box and is actuated by a hydraulic actuator. The actuators receive hydraulic pressure from the solenoid control box assembly. Tank drains can be either gravity or pressure fed.

HOSE REEL
A reel assembly that is located on the bottom aft end of the water tank fitted with a 1" or 1.5" diameter reinforced rubber hose and a fire fighting style nozzle. The hose reel assembly receives pressurized water from the pressurized manifold on the back of the tank to operate.

OIL COOLER (IF EQUIPPED)
A water to oil heat exchanger that is located near the top aft bulkhead of the water tank. Hot oil from the drive motor return passes through the cooler, which receives pressurized cold water flowing from the spray bar and passing through the heat exchanger to cool the oil before returning the water to the water tank.
SECTION 2  
System Description

FIRE SUPPRESSION SYSTEM
A system that consists of a 120 or 60 gallon stainless steel holding tank, an electric or pneumatic actuated shut-off valve, in-cab control switch, hosing and a foam eduction nozzle mounted to the water cannon.

FOAM CONCENTRATE TANK
A stainless steel tank mounted in the forward upper portion of the water tank. The holding tank contains a supply tube that extends to the bottom of the tank and connected to a flexible hose at the top of the tank and then routed to the foam agent shut-off valve. The tank also contains a pressure/vacuum cap which keeps foreign matter out of the tank while providing for pressure relief and air displacement during temperature changes.

ELECTRIC/PNEUMATIC SHUT-OFF VALVE
The in-line shut-off valve is mounted on the foam tank upper lip and is controlled by the in-cab control FOAM switch. The shut-off valve is actuated by either an electric or pneumatic actuator that is controlled by the in-cab control switch. Once the shut-off valve is opened, foam concentrate will flow from the holding tank to the monitor nozzle if the monitor and water pump switches are ON.

FOAM EDUCTION NOZZLE
A manual or remote adjustable (fog/stream) nozzle is attached to the water cannon waterway. The nozzle inner housing uses monitor high pressure water to create a venture effect that will create a suction force that pulls foam concentrate from the holding tank. Once foam concentrate is flowing, the nozzle proportions foam concentrate, water and air to produce finished foam. The nozzle can be adjusted to allow control of foam solution at a rate of 1%, 3% or 6%. Rate adjustment is obtained by replacing a removable disk.

WATER CIRCULATION SYSTEM
A system that consists of a hydraulic butterfly valve assembly and a perforated 4” pipe located inside the water tank. The system diverts the flow of water from the spray system to the perforated pipe, circulating the water in the tank. The circulation valve must be closed to operate the spray system, and water cannon.

SUCTION LOADING (IF EQUIPPED)
A second water pump mounted typically to the water pump sump at the rear of the MAC. The suction loading station is equipped with a manual diversion valve that will switch the hydraulic oil flow from the main discharge pump drive motor to the suction loading pump drive motor. When oil is diverted to the suction loading drive motor, it can pull water from a holding pond and fill the MAC. The suction loading option includes lengths of 4” suction hose equipped with quick couplers and a check valve inlet foot with a debris screen. The suction hoses are typically stored in tubes either built into the MAC or a hanging tube arrangement.
SECTION 3
Limitations

Contents

WATER PUMP

The following cautions are operational limitations of Mega water pumps. Failure to heed these cautions may result in reduced pump life and severe water pump damage.

CAUTION

Do not operate the water pump in a dry sump. Operating the water pump with a dry sump will result in water pump component damage and reduced service life.

CAUTION

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

CAUTION

Limit water pump operation to 2.5 minutes when in a no-flow condition (not flowing water through spray heads, dump bar, water cannon, drain valve or hose reel). Water pump operation in a no flow condition will cause overheating of the water pump and damage to the shaft bearings and seals.

CAUTION

Avoid any sudden stoppage of water pump e.g.; disengaging water pump above LOW IDLE. Stopping water pump suddenly above LOW IDLE will result in shaft, impeller and drive motor damage.

CAUTION

Water pump RPM must not exceed the specifications listed below with engine at HIGH IDLE. Failure to ensure water pump speed is at or below specifications will result in reduced spray system component service life.

<table>
<thead>
<tr>
<th>PUMP MODEL</th>
<th>RPM</th>
</tr>
</thead>
<tbody>
<tr>
<td>M-3 PUMP</td>
<td>2350 ± 50</td>
</tr>
<tr>
<td>M-4 PUMP</td>
<td>1,900 ± 50</td>
</tr>
<tr>
<td>B-4 PUMP</td>
<td>2,000 ± 50</td>
</tr>
<tr>
<td>M-4B PUMP</td>
<td>2,000 ± 50</td>
</tr>
</tbody>
</table>

NOTE

The suction loading pump has a maximum vertical lift capability of 8-10 feet. Attempting to pump water into the tank from a reservoir that is more than 8-10 feet below the pump station will result in reduced suction loading performance.

Limitations
SECTION 4
Normal Operations

Contents
Description..........................................................................4-1
Before Operations............................................................4-1
Operations..........................................................................4-2
After Operations...............................................................4-6
Cold Weather Operation And Storage .....................4-6

DESCRIPTION
This section provides the vehicle operator with step by step operating procedures for the installed MAC system. The information is separated into before operations, operations and after operations. A pocket size checklist of all listed procedures is also provided in the Appendix for use in the vehicle cab.

BEFORE OPERATIONS
These procedures are used to perform a walk-around inspection of the MEGA water tanker system before use or the beginning of a shift. This inspection is in addition to and does not replace the vehicle manufacturer’s inspection requirements.
1. Chocks – As Required
2. Vehicle Parking Brake – ON
3. Cab Control Switches – SET OFF
4. (If Equipped) Foam Concentrate Level – CHECKED. At least 1” from the top of the foam tank.

WARNING
Ensure PPE fall arrest harness is worn, adjusted properly and attached to an anchor point. Failure to use PPE properly may result in personnel injury or death.

5. Water Cannon – CHECKED & SECURED
   a. Nozzle – Check for security and kinking of foam concentrate supply line.
6. Solenoid Control Box – CHECKED AND SECURED
7. MAC Front Mounts – CHECKED AND SECURE
8. Vehicle Hydraulic Tank – SERVICED
9. LH Hydraulic Hoses and Cabling – CHECKED FOR SECURITY AND LEAKS.
10. Chassis Pivot Bore Pins – INSTALLED AND SECURED
11. Tank Drain Petcocks – CLOSED
12. Spray Heads – SECURED & SET
13. (If Equipped) Oil Cooler – CHECKED FOR SECURITY AND LEAKS
14. Water Pump Assembly – CHECKED
   a. Water Pump – Check to ensure volute case drain valve is closed.
   b. Water pump and drive motor for evidence of overheating.
15. Hose Reel – CHECKED
16. (Rear Bulkhead Location Only) Solenoid Control Box – CHECKED.
17. RH Hydraulic Hosing & Cabling – CHECKED FOR SECURITY AND LEAKS.
18. (If Equipped) Front Bumper Spray Heads & Plumbing – SECURED AND SET.
SECTION 4  
System Description

OPERATIONS
Use these procedures to safely operate the standard and optional systems installed on the MEGA water tanker.

**CAUTION**

Limit water pump operation to 2.5 minutes when in a no-flow condition (not flowing water through spray heads, dump bar, monitor, drain valve or hose reel). Water pump operation in a no flow condition will cause overheating of the water pump and damage to the shaft bearings and seals.

SPRAY HEAD SYSTEM

**NOTE**

Operating more than 4 spray heads simultaneously will greatly reduce the width and flow of active spray heads.

1. Cab Control SYSTEM/POWER Switch – ON
2. INTERMITTENT TIMER – SET
   a. TIMER ON/OFF Dials – SET
   b. INTERMITTENT Switch – SET
3. PUMP Switch – ON
4. Individual Spray Heads – SELECTED

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

5. PUMP Switch – OFF

Once operations are complete:

6. Cab Control SYSTEM/POWER Switch – OFF

GPS AUTO MODE

1. Cab Control POWER Switch – ON
2. PUMP Switch ON

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

3. AUTO – SET AS REQUIRED
   a. RATE and SPEED Dials – SET
   b. AUTO Switch – ON
4. Individual Spray Head Switches – ON

Once operations are complete:

5. Individual Spray Head Switches – OFF
6. PUMP Switch – OFF

7. Cab Control POWER Switch - OFF

DUMP BAR

1. Cab Control SYSTEM/POWER Switch – ON
2. INTERMITTENT – SET AS REQUIRED
   a. TIMER ON/OFF Dials – SET
   b. INTERMITTENT Switch – SET
3. PUMP Switch – ON

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

4. DUMP Bar Switch – ON

5. Cab Control SYSTEM/POWER Switch – OFF

6. Cab Control SYSTEM/POWER Switch – OFF
SECTION 4
System Description

Once operations are complete:

5. PUMP Switch – OFF

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

6. Cab Control SYSTEM/POWER Switch – OFF

WATER CANNON
1. Cab Control SYSTEM/POWER Switch – ON
2. PUMP Switch – ON

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

4. MONITOR/BFV Switch – ON
5. Water Cannon Joystick – As Required.
6. MONITOR/BFV Switch – OFF

Once operations are complete:

7. Water Cannon Nozzle - STOW

**CAUTION**
Manual and remote adjustable nozzles must be stowed pointing vertically to reduce wear on water cannon joints. Leaving the nozzle in any other position will cause increased wear on water cannon joints and result in premature joint failure.

8. PUMP Switch – OFF

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

9. Cab Control SYSTEM/POWER Switch – OFF

FIRE SUPPRESSION SYSTEM
1. Cab Control SYSTEM/POWER Switch – ON
2. PUMP Switch – ON

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

4. FOAM Switch – ON
5. MONITOR/BFV Switch – ON

Once operations are complete:

7. FOAM Switch – OFF
8. Water Cannon – Flow water through the monitor nozzle with the FOAM switch off to flush foam from the nozzle.

9. MONITOR/BFV Switch – OFF
10. Water Cannon Nozzle – STOW

**CAUTION**
Manual and remote adjustable nozzles must be stowed pointing vertically to reduce wear on water cannon joints. Leaving the nozzle in any other position will cause increased wear on water cannon joints and result in premature joint failure.
**SECTION 4**

**System Description**

11. PUMP Switch – OFF

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

12. Cab Control SYSTEM/POWER Switch – OFF

13. Vehicle – Wash or fresh water rinse areas exposed to the foam spray.

**TANK DRAIN**
1. Cab Control SYSTEM/POWER Switch – ON

2. PUMP Switch – ON

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

3. DRAIN Switch – ON

4. Water Level – Drain to desired level.

**CAUTION**
Do not operate the water pump in a dry sump. Dry running operation will cause water pump failure.

*Once operations are complete:*

5. DRAIN Switch – OFF

6. PUMP Switch – OFF

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

7. Cab Control SYSTEM/POWER Switch – OFF

**HOSE REEL**
1. Hose Nozzle – CLOSED

2. Hose – Deploy desired length.

3. Gate Valve – OPEN

4. Cab Control SYSTEM/POWER Switch – ON

5. PUMP Switch – ON

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

6. Vehicle RPM – SET

*Once operations are complete:*

8. Hose Nozzle – CLOSE

9. Vehicle RPM – LOW IDLE

10. PUMP Switch – OFF

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

11. (If Equipped) Cab Control SYSTEM/POWER Switch– OFF

12. Gate Valve – CLOSED

**WATER CIRCULATION SYSTEM**
1. Fill water tank with appropriate fluid.

2. Start engine.

3. Cab Control SYSTEM/POWER Switch – ON.
SECTION 4
System Description

4. PUMP Switch – ON

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

5. DRAIN Switch – ON. (Opens BFV that allows water pressure to mix water tank contents)

When operation is complete:

6. DRAIN Switch – OFF.

**NOTE**
Keep the switch ON until water cannon or spray system is used to flow the water mixture. If switch is left ON, circulation system will significantly reduce water cannon reach.

7. PUMP Switch – OFF

8. SYSTEM/POWER Switch – OFF

**SUCTION LOAD STATION**
1. Place vehicle near water holding pond.

2. Secure vehicle and make unit safe for exiting cab.

3. Foot Valve – Serviceable

4. Suction Hoses – Inspect suction hoses for serviceability. Ensure suction hoses are connected properly to each other and the suction load inlet to prevent air leaks while in use.

5. Suction Hoses – Immerse in pond or water supply.

**NOTE**
The suction loading pump has a maximum vertical lift capability of 8-10 feet. Attempting to pump water into the tank from a reservoir that is more than 8-10 feet below the pump station will result in reduced suction loading performance.

6. Position all butterfly valves as indicated in the following pictures and in the order as follows:
   a. SUMP VALVE - CLOSE
   b. SUCTION VALVE - OPEN
   c. SPRAY BAR VALVE - CLOSE
   d. TANK FILL VALVE - OPEN

**NOTE**
Opening and closing valves in this sequence allows the water in the suction loading sump built inside of the tank to flood the water pump and suction hose. This will allow water pump to lift water from pond.

7. Ensure water pump and suction hoses are full of water before operating pump.

**CAUTION**
Operating the water pump in a dry sump will result in shaft seal damage.
SECTION 4
System Description

8. Ensure foot valve remains submerged in water.

10. At LOW IDLE turn SYSTEM/POWER switch ON.

11. (DiSCS Only) AUX2 - ON

12. Turn PUMP Switch – ON

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

13. Increase engine RPM to HIGH IDLE.

*When unit is full of water*

14. Reduce engine RPM to LOW IDLE.

15. PUMP Switch – OFF

**CAUTION**
Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

16. AUX2 - OFF

17. SYSTEM/POWER Switch OFF.

18. Turn engine OFF.

19. Disconnect, drain and stow suction hoses.

**AFTER OPERATIONS**
These procedures are used to perform a walk-around inspection after using the MEGA water tanker systems. This inspection is in addition to and does not replace the vehicle manufacturer’s inspection requirements.

1. Vehicle parking brake – ON

2. Cab Control Switches – SET OFF

3. Chocks – As Required

4. Water Cannon – CHECKED & SECURED

5. Vehicle Hydraulic Tank - CHECKED

6. Tank Lines and Hoses – SECURED

7. Tank Drain Petcocks – As Required.

8. Spray Heads – SECURED & SET

9. *(If Equipped)* Oil Cooler – CHECKED FOR SECURITY AND LEAKS

10. Water Pump – CHECKED

   a. Water Pump – Check for damage and volute case drain valve set as required.

11. Hose Reel – CHECKED

12. Solenoid Control Box – CHECKED

**COLD WEATHER OPERATION AND STORAGE**

**CAUTION**
Ice will cause serious damage to water pump, spray heads, butterfly valves, water-to-oil cooler, and the water cannon if water is allowed to freeze in the volute case, water piping, or on top of a closed butterfly valve. Ensure all water is drained from system when the temperatures are expected to fall below 4.4°C (40°F) for any period of time. Failure to ensure all systems are drained and free from standing water will result in shaft, operator, diaphragm, drive motor, water pump, water-to-oil cooler, or butterfly valve damage when operation is attempted with ice in the housings.

To ensure all water is drained from tank check the following:

1. Park unit on a slight nose up angle to allow water to flow to the rear of the tank.

2. Drain the tank using an appropriate method until the Water Level Gauge reads EMPTY.
SECTION 4
System Description

3. Open all drain petcocks (water pump, suction load pump, rear spray bar, front spray bar, etc.).
4. Remove water pump sump cover.
5. Start engine.
6. Cab Control SYSTEM/POWER Switch – ON
7. MONITOR/BFV Switch – ON
8. DUMP BAR Switch – ON
9. DRAIN Switch – ON
10. Water Cannon Nozzle – Pointed fully DOWN
11. Cab Control SYSTEM/POWER Switch – OFF
12. Turn engine off.
13. Hose Reel – DRAIN
   a. Hose – UNWIND
   b. Nozzle – Fully OPEN
   c. Gate Valve – OPEN
   d. Allow water to drain.
   e. Hose – REWIND
   f. Gate Valve – CLOSED
   g. NOZZLE – CLOSED
14. Check to ensure all water has drained from tank.

TO REACTIVATE UNIT:
1. Lubricate water pump bearings as instructed in -2 technical manual.
2. Inspect tank interior to ensure it is clean, if the tank is coated, ensure coating integrity, clean or repair as required.
3. Install sump cover with new gasket.
4. Close all drain valves and petcocks.
5. Start engine.
6. Control SYSTEM/POWER Switch – ON
7. Individual Spray Head Switches – OFF
8. DUMP BAR Switch – OFF
9. DRAIN Switch – OFF
10. MONITOR/BFV Switch – OFF
11. Cab Control SYSTEM/POWER Switch – OFF
12. Turn engine off.

SECTION 6
Employment

Contents

DESCRIPTION
This section provides descriptions, guidance, and techniques used when employing the MEGA spray system. These best practices will provide operators with several different choices that will result in maximum system performance in most applications with ever changing conditions.

GPS GROUND SPEED SENSING
The resident software provides a consistent layer of water on haul roads regardless of ground speed. The software minimizes water usage and prevents puddling at stops and haul ramps. Nominal settings produce about 3 liters per cubic meter regardless of ground speed. This maximizes water usage and extends the duration of a given load of water. Adjustments are provided to increase or decrease the layer of water dispersed, as well as setting maximum water flow at a desired ground speed. All automatic system protection features are active regardless of auto or manual modes.

Here are several examples of initial system setup and adjustments:

EXAMPLE 1
Setup:
1. RATE - Set at midpoint (50%)
2. SPEED - Set at mid-point (approximately 15 MPH/24 KPH)
3. AUTO – ON
4. Spray heads - Select all 4 spray heads
5. Vehicle speed – Less than 21 KPH/14 MPH

Observed Operation:
1. 2 Outer spray heads on with a timed cycle, shortened ON cycle durations
2. 2 Center spray heads OFF (reduced volume)

EXAMPLE 2
Setup:
1. RATE - Set at midpoint (50%)
2. SPEED - Set at mid-point (approximately 24 KPH/15 MPH)
3. AUTO – ON
4. Spray heads - Select all 4 spray heads
5. Vehicle speed – Greater than 27 KPH/16 MPH

Observed Operation:
1. All 4 requested spray heads ON, NO timed cycle

EXAMPLE 3
Setup:
1. RATE - Set LESS than midpoint (≤50%)
2. SPEED - Set at mid-point (approximately 24 KPH/15 MPH)
3. AUTO – ON
4. Spray heads - Select all 4 spray heads
5. Vehicle speed – Less than 21 KPH/14 MPH

Observed Operation:
1. 2 Outer spray heads on with a timed cycle, shortened ON cycle durations
2. 2 Center spray heads OFF (reduced volume)

EXAMPLE 4
Setup:
1. RATE - Set at GREATER than midpoint (≥50%)
2. SPEED - Set at mid-point (approximately 24 KPH/15 MPH)
3. AUTO – ON
4. Spray heads - Select all 4 spray heads
5. Vehicle speed – Less than 21 KPH/14 MPH

Observed Operation:
1. 2 Outer spray heads on with a timed cycle, increased ON cycle durations
2. 2 Center spray heads OFF (reduced volume)

BEFORE OPERATIONS

These procedures are used to perform a walk-around inspection of the MEGA water tanker system before use or beginning of a shift. This inspection is in addition to and does not replace the vehicle manufacturer's inspection requirements.

1. Chocks – As Required.

2. Vehicle Parking Brake – ON

3. Cab Control Switches – SET OFF

4. *(If Equipped)* Foam Concentrate Level – CHECKED
   (No more than 1” from the top of the tank.)

   **WARNING**

   Ensure PPE fall arrest harness is worn, adjusted properly and attached to an anchor point. Failure to use PPE properly may result in personnel injury or death.

5. Water Cannon – CHECKED AND SECURED
   a. Nozzle – Check for security and kinking of foam concentrate supply line.

6. *(Front Bulkhead Location Only)* Solenoid Control Box – CHECK AND SECURED
7. MAC Front Mounts – CHECKED AND SECURED

8. Vehicle Hydraulic Tank – SERVICED

9. LH Hydraulic Hoses & Cabling – CHECKED FOR SECURITY AND LEAKS

10. Chassis Pivot Bore Pins – INSTALLED AND SECURED

11. Tank Drain Petcocks – CLOSED

12. Spray Heads – SECURED AND SET

13. *(If Equipped)* Oil Cooler – CHECKED FOR SECURITY AND LEAKS

14. Water Pump – CHECKED
   a. Water Pump – Check to ensure volute case drain valve is closed. Pump bracket for evidence of overheating.
   b. Drive Motor – Evidence of overheating.

15. Hose Reel – CHECKED

16. *(Rear Bulkhead Location Only)* Solenoid Control Box – CHECKED
17. RH Hydraulic Hoses and Cabling – CHECKED FOR SECURITY AND LEAKS.

18. (If Equipped) Front Bumper Spray Heads and Plumbing – SECURED AND SET

**OPERATIONS**

Use these procedures to safely operate the standard and optional systems installed on the MEGA water tanker.

**CAUTION**

Limit water pump operation to 2.5 minutes when in a no-flow condition (no flow from spray heads, dump bar, water cannon, drain valve or hose reel). Water pump operation in a no flow condition will cause overheating of the water pump and damage to the shaft bearings.

**SPRAY HEAD SYSTEM**

**NOTE**

Operating more than 3 spray heads simultaneously will greatly reduce the width and flow of active spray heads.

1. Cab Control SYSTEM/POWER Switch – ON

2. INTERMITTENT – SET AS REQUIRED
   a. TIMER ON/OFF Dials – SET

N-4
b. INTERMITTENT Switch – SET

3. PUMP Switch – ON

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

4. Individual Spray Head Switches – ON

*Once operations are complete:*

5. Individual Spray Head Switches – OFF

6. PUMP Switch – OFF

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

7. Cab Control SYSTEM/POWER Switch – OFF

**GPS AUTO MODE**

1. Cab Control POWER Switch – ON

2. RATE and SPEED Dials - SET
3. AUTO – ON AS REQUIRED

4. Desired Spray Head Switches – ON

5. PUMP Switch ON

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

*Once operations are complete:*

6. PUMP Switch OFF

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

7. AUTO – OFF

8. Individual Spray Head Switches – OFF

9. Cab Control POWER Switch - OFF
DUMP BAR

1. Cab Control SYSTEM/POWER Switch – ON

2. INTERMITTENT – SET AS REQUIRED
   a. Timer ON/OFF Dials – SET
   b. INTERMITTENT Switch – SET

3. PUMP Switch ON

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

4. DUMP BAR Switch – ON

*Once operations are complete:*

5. DUMP BAR Switch – OFF

6. PUMP Switch OFF

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

7. Cab Control SYSTEM/POWER Switch – OFF

---

N-7
WATER CANNON

1. Cab Control SYSTEM/POWER Switch – ON

2. PUMP Switch ON

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

4. MONITOR/BFV Switch – ON

5. Water Cannon Joystick – As Required.

6. MONITOR/BFV Switch – OFF

*Once operations are complete:*

7. Water Cannon Nozzle - STOW

**CAUTION**

Manual and remote adjustable nozzles must be stowed pointing vertically to reduce wear on water cannon joints. Leaving the nozzle in any other position will cause increased wear on water cannon joints and result in premature joint failure.
8. PUMP Switch OFF

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

9. Cab Control SYSTEM/POWER Switch – OFF

**FIRE SUPPRESSION SYSTEM**

1. Cab Control SYSTEM/POWER Switch – ON

2. PUMP Switch ON

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

4. FOAM Switch – ON

5. MONITOR/BFV Switch – ON

Once operations are complete:

7. FOAM Switch – OFF

8. Water Cannon – Flow water through the water cannon nozzle with the FOAM switch off to flush foam from the nozzle.

9. MONITOR/BFV Switch – OFF

10. Water Cannon Nozzle - STOW

**CAUTION**

Manual and remote adjustable nozzles must be stowed pointing vertically to reduce wear on water cannon joints. Leaving the nozzle in any other position will cause increased wear on water cannon joints and result in premature joint failure.

11. PUMP Switch OFF

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

12. Cab Control SYSTEM/POWER Switch – OFF
13. Vehicle – Wash or fresh water rinse areas exposed to the foam spray.

**TANK DRAIN**

1. Cab Control SYSTEM/POWER Switch – ON

2. PUMP Switch ON

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

3. DRAIN Switch – ON

4. Water Level – Drain to desired level.

**CAUTION**

Do not operate the water pump in a dry sump. Dry running operation will cause water pump failure.

*Once operations are complete:*

5. DRAIN Switch – OFF
6. PUMP Switch OFF

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

7. Cab Control SYSTEM/POWER Switch – OFF

**HOSE REEL**

1. Hose Nozzle – CLOSED

2. Hose – Deploy desired length.

3. Gate Valve – OPEN

4. Cab Control SYSTEM/POWER Switch – ON

5. PUMP Switch ON

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

6. Vehicle RPM – SET

Once operations are complete:

8. Hose Nozzle – CLOSE
9. Vehicle RPM – LOW IDLE
10. PUMP Switch OFF

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

11. Cab Control SYSTEM/POWER Switch – OFF
12. Gate Valve – CLOSED

**WATER CIRCULATION SYSTEM**

1. Fill water tank with appropriate fluid.
2. Start engine.
3. Cab Control SYSTEM/POWER Switch – ON.
4. PUMP Switch – ON.
5. DRAIN Switch – ON. (Opens BFV that allows water pressure to mix water tank contents)

*When operation is complete:*
6. DRAIN Switch – OFF.
7. PUMP Switch – OFF
8. SYSTEM/POWER Switch – OFF

**SUCTION LOAD STATION**
1. Place vehicle near water holding pond.
2. Secure vehicle and make unit safe for exiting cab.
3. Foot Valve – Serviceable
4. Suction Hoses – Inspect suction hoses for serviceability. Ensure suction hoses are connected properly to each other and the suction load inlet to prevent air leaks while in use.
5. Suction Hoses – Immerse in pond or water supply.

**NOTE**

The suction loading pump has a maximum vertical lift capability of 8-10 feet. Attempting to pump water into the tank from a reservoir that is more than 8-10 feet below the pump station will result in reduced suction loading performance.
6. Position all butterfly valves as indicated in the following pictures and in the order as follows:
   a. SUMP VALVE - CLOSED
   b. SUCTION VALVE - OPEN
   c. SPRAY BAR VALVE - CLOSED
   d. TANK FILL VALVE - OPEN

7. Ensure water pump and suction hoses are full of water before operating pump.

   **CAUTION**

   Operating the water pump in a dry sump will result in shaft seal damage.

8. Ensure foot valve remains submerged in water.

10. At LOW IDLE turn SYSTEM/POWER switch ON.

11. (DiSCS Only) AUX2 - ON

12. PUMP Switch ON

   **CAUTION**

   Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.
13. Increase engine RPM to HIGH IDLE.

*When unit is full of water*

14. Reduce engine RPM to LOW IDLE.

15. PUMP Switch OFF

**CAUTION**

Engaging/disengaging the water pump above LOW IDLE may result in water pump component damage and reduced service life.

16. AUX2 - OFF

17. SYSTEM/POWER Switch OFF.

18. Turn engine OFF.

19. Disconnect, drain and stow suction hoses.

**AFTER OPERATIONS**

These procedures are used to perform a walk-around inspection after using the MEGA water tanker systems. This inspection is in addition to and does not replace the vehicle manufacturer’s inspection requirements.

1. Vehicle parking brake – ON
2. Cab Control Switches – SET OFF

3. Chocks – As Required.

4. Water Cannon – CHECKED AND SECURED

5. Vehicle Hydraulic Tank – CHECKED

6. Tank Lines and Hoses – SECURED

7. Tank Drain Petcocks – As Required.

8. Spray Heads – SECURED AND SET

9. (If Equipped) Oil Cooler – CHECKED FOR SECURITY AND LEAKS

10. Water Pump Assembly – CHECKED
    a. Water Pump – Check for damage and volute case drain valve set as required.

11. Hose Reel – CHECKED

12. Solenoid Control Box – CHECKED
COLD WEATHER OPERATION AND STORAGE

CAUTION

Ice will cause serious damage to water pump, spray heads, butterfly valves, water-to-oil cooler, and the water cannon if water is allowed to freeze in the volute case, water piping, or on top of a closed butterfly valve. Ensure all water is drained from system when the temperatures are expected to fall below 4.4°C (40°F) for any period of time. Failure to ensure all systems are drained and free from standing water will result in shaft, operator, diaphragm, drive motor, water pump, water-to-oil cooler, or butterfly valve damage when operation is attempted with ice in the housings.

To ensure all water is drained from tank check the following:

1. Park unit on a slight nose up angle to allow water to flow to the rear of the tank.

2. Drain the tank using an appropriate method until the Water Level Gauge reads EMPTY.

3. Open all drain petcocks (water pump, suction load pump, rear spray bar, front spray bar, etc.).

4. Remove water pump sump cover.
5. Start engine.

6. Cab Control SYSTEM/POWER Switch – ON

7. MONITOR/BFV Switch – ON

8. DUMP BAR Switch – ON

9. DRAIN Switch – ON

10. Water Cannon Nozzle – Pointed fully DOWN

11. Cab Control SYSTEM/POWER Switch – OFF

12. Turn engine off.

13. Hose Reel – DRAIN
   a. Hose – UNWIND
   b. Nozzle – Fully OPEN
   c. Gate Valve – OPEN
   d. Allow water to drain.
   e. Hose – REWIND
   f. Gate Valve – CLOSED
   g. NOZZLE – CLOSED

14. Check to ensure all water has drained from tank.
TO REACTIVATE UNIT:

1. Lubricate water pump bearings as instructed in the Maintenance (-2) technical manual.

2. Inspect tank interior to ensure it is clean, if the tank is coated, ensure coating integrity, clean or repair as required.

3. Install sump cover with new gasket.

4. Close all drain valves and petcocks.

5. Start engine.

6. Control SYSTEM/POWER Switch – ON

7. Individual Spray Head Switches – OFF

8. DUMP BAR Switch – OFF

9. DRAIN Switch – OFF

10. MONITOR/BFV Switch – OFF

11. Cab Control SYSTEM/POWER Switch – OFF

12. Turn engine off.
